

IN THE SPECIFICATION

On Page 4, replace the second paragraph as follows:

As shown in **FIGS. 1-3**, the cab **12** is spaced-apart from the body **14** of the combine **10**. As shown in **FIG. 4**, the cab **12** includes a back wall **36** that preferably includes a transparent window **38** that provides an operator seated in the cab **12** with enhanced visibility behind the cab **12**. In the embodiment shown, the transparent window **38**, together with the first and second transparent panels **30, 32** and the front curved transparent panel **34**, provides substantially 360-degree visibility from the cab **12**. The transparent window **38** may preferably be comprised of glass. One advantage of the spaced location of the cab **12** relative to the body **14** is that it provides ample distance between the cab **12** and the body **14** to provide an operator with enhanced visibility through the transparent window **38** of both the field and the various operating equipment located behind the cab **12**. Also, the spaced location of the cab **12** relative to the body portion **14** of the combine **10** provides improved aesthetics for the combine **10**.
